Please amend the abstract as follows:

ABSTRACT OF THE DISCLOSURE

~~It is designed to realize a~~ The copy of data in two directions is realized without fixing a copy direction to one direction between storage device systems which ~~configure~~ constitute a copy pair. In storage device systems which ~~configure the~~ constitute a copy pair, a data consistency holding control part is disposed. The data consistency holding control part ~~controls~~ operates so as to write write-in data to a logical volume which forms the copy pair into a physical storage device after ~~it has a~~ cache part has waited for more than a predetermined time from the corresponding reception time, in such a manner that, when write-in data which was received from a superior device and write-in data which was received from another storage device system through DKCI/F are written into the same storage location of the physical storage device in an overlapped manner, they are written in the order of the time of reception time ~~that~~ on which the write-in data was received from a superior device.
